

Dispatch

by Ever.Ag

Solutions for Today's Milk Supply Chain

As multiple forces converge to increase the demands on milk schedulers and haulers, the industry continues to look for tools that can tame the – at times unwieldy – farm to plant milk journey. The Dispatch module of Milk+ helps streamline core daily activities, keep all stakeholders on the same page, reduce manual and repetitive steps, and ultimately enhance the experience of the producer, hauler and receiving plant.

HOW IT WORKS

Dispatch manages, reconciles, and accounts for every scheduled movement from pickup through plant delivery. While continuing to grow with your business and technology, the solution consolidates orders and routes into an easy-to-use schedule view and elegantly handles milk swaps with trading partners. Additionally, Dispatch leverages real-time load status to provide dispatchers and receiving plants critical insights into schedule compliance, load location, missing loads, weight variances, and much more. To facilitate the ease of handling hundreds of loads a day, Dispatch deals with common issues such as load reassignments, refusals, managing holdovers, and scheduling in and out of drop yards.

FACTS AND FIGURES

75+

billion pounds
dispatched
annually

4,000

trucks
scheduled
every day

400

haulers rely
on dispatch
every day

300

plants rely
on dispatch
every day

MODULES

Dispatch works seamlessly with the solutions within the Milk+ platform. Integrations provide visibility of data to partners throughout the dairy supply chain. The modules within Dispatch are designed to provide actionable insights and oversee milk loads to improve efficiency.

SUPPLY SCHEDULE

Manage milk supply
at the load level

DEMAND SCHEDULE

Handle demand
requirements for
each plant

ORDER SCHEDULE

Enable management
of orders by plant or
dispatch user

PLUS WORKSHEET

Estimate ordering
requirements for a
scheduling week

RESULTS

Immediate Through the use of the Dispatch solution, you will notice easily managed schedules and communicated changes with customers and trading partners. Dispatch is proven to handle hundreds of load schedules; thus, you will notice reduced staff needed to handle the day-to-day operations. Upon implementation of Dispatch, you will find the business is able to engage with collaborative customer ordering and real-time order fulfillment.

The use of inbound raw milk plant schedules within Dispatch will assist in managing arrival schedules, resulting in increased visibility and reduced detention time.

Dispatch is a module in the Milk+ platform which also includes Mobile Manifest, Producer Portal and Producer Payroll. Mobile Manifest provides detailed, easy-to-share electronic records of raw milk's movement from farm to plant.

KEY BENEFITS

- Immediate feedback speeds up the reconciliation process
- Easily move large volumes of loads efficiently
- Enhanced communication and improved collaboration with supply partners
- Integrate with other Ever.Ag supply chain solutions for full visibility
- Accessible 24/7

IMPROVE YOUR PROFITABILITY BY OPTIMIZING HAULING EFFICIENCY.
