

# Producer Payroll by Ever.Ag

## Efficient and Accurate Payments to Producers and Haulers

Producer Payroll helps save time and resources by simplifying the complexities surrounding producer and hauler payments - all while adhering to strict government regulations.

### HOW IT WORKS

Producer Payroll is an off-the-shelf and easy to implement cloud-based system for all your milk accounting needs. It's a powerful workhouse that supports the monthly payroll for thousands of US dairy farmers in every federal order.

To start, the payroll system collects and stores pickup level information - matching unique load and route identifiers from Dispatch and Mobile Manifest. Lab results are automatically imported and matched using customizable, user defined algorithms. You can then easily assign producers into different pay groups to accommodate various payment structures and scenarios (volumes, quality, one-time, components, market, etc). Hauler pay largely mirrors producer pay functionality with advanced pay structure components: stop charges, fuel, assembly miles, and assignments. All records, manifests, scale ticket images, lab imports are stored and retained electronically to ease future data reference, analysis and audits.

### WHAT IT DOES

Producer Payroll tracks third-party milk allowing for simple pay-period balancing. Additionally, a configurable invoicing wizard generates pay-period customer milk invoices. Cooperatives also find adding Equity as a sensible extension to manage patronage and capital retains.

Addressing the demands of CFOs and auditors, Producer Payroll features a simplified workflow structure that not only facilitates prompt and accurate payments that conform with all local, state, and federal regulations, but allows for permission-based roles for internal employees. This generates an audit trail and allows only certain individuals access to certain information and requires approval steps for each critical step in the calculation and pay process, providing necessary checks and balances.

### CASE STUDY

Learn how Mullins Cheese partnered with Ever.Ag to improve their payroll processing.

# Producer Payroll OVERVIEW BROCHURE

## RESULTS

Whether moving from a homegrown or on-premise solution, or finally abandoning the spreadsheets, implementing Producer Payroll positions your company with the foundational technology for your digital transformation. The system allows for ample flexibility and configurability to handle today's payroll complexities as well as tomorrow's. As a portable, cloud-solution, the tool enables internal teams to expand geographically and breaks the tie to the internal network. ERP integrations link pay activities to the overall enterprise financials.

Companies save from a reduction in internal hardware and license costs, not to mention the time savings that come from a more efficient payroll workflow. More important, the feature rich application allows procurement and payroll managers to look deep into pay programs and implement more meaningful payment schemes to their suppliers.

## FACTS AND FIGURES

**thousands**

of US dairy farmers

**nationwide**

paying producers in every Federal Order

## KEY BENEFITS

- Enables prompt and accurate payments with a streamlined process
- Reduces errors with multi-step payroll workflow
- Accessible to federal and state regulators upon permission
- Provides various payment customization

### MANAGED SERVICES

Producer Payroll Managed Services provides efficient and accurate management of payments to producers and haulers administered by a team of dairy professionals.
