

Receiving by Ever.Ag

Manage Raw Milk Intake and Supplier Balancing

Receiving by Ever.Ag enables milk suppliers and their customer plants to collaborate and seamlessly manage the milk receipt process. The solution simplifies complexities, improves collaboration, and increases efficiency.

HOW IT WORKS

Receiving is used in the unloading bay and enables a paperless, and therefore more reliable, collection of common attributes such as weights, components, quality tests, and more. Through a configurable data input screen, Receiving will integrate with your operations effortlessly. The solution also syncs with Dispatch and Mobile Manifest, as part of the Milk+ platform, to provide real-time insights into load status so you have visibility into all areas of your business.

RESULTS

Receiving will improve your collaboration at the unloading bay by making the information you collect easy to share now and in the future, should it be needed. Upon implementation, your dairy business will experience a streamlined receiving process with powerful reports that simplify the identification of any load level shrink. Receiving results in quicker data reports and collaborative “planned loads” versus “actual receipts” visibility in real-time.

HOW TO RECOGNIZE OPPORTUNITIES FOR INNOVATION IN A CONNECTED DAIRY SUPPLY CHAIN

Make all the pieces of your supply chain process work together seamlessly.
