

Feedlot IQ

Built with veterinarians. Proven in working yards.

Across the beef industry, feedlot managers face rising complexity: unpredictable weather, feed variability, animal health challenges, and volatile markets. Every one of those factors can chip away at consistency, efficiency, and animal wellbeing — costing the industry **hundreds of millions each year** in lost performance and unrealized opportunity. The data to solve these challenges already exists. What's been missing is a clear, connected view of what's happening — and when it's time to act. Feedlot IQ delivers that clarity.

Feedlot IQ turns the data already in your operation into actionable insight. It brings together health, feed, and performance data in one intelligent view, helping managers and veterinarians see what's changing early, make defensible decisions, and improve health and consistency across the yard.

This isn't about replacing experience — it's about giving it sharper focus. Feedlot IQ helps the people who know cattle best make faster, more confident decisions that protect performance, wellness, and efficiency.

Developed through a collaboration between **Ever.Ag** and **Production Animal Consultation (PAC)**, Feedlot IQ combines world-class veterinary expertise with the power of data science and **Artificial Intelligence**.

- **PAC** brings decades of feedlot experience, hands-on veterinary insight, and one of the world's largest animal health datasets — over **60 million head of cattle**.
- A leading voice in cattle health and welfare, helped shape the system's foundation using real-world data and field-driven protocols.
- **Ever.Ag** applies advanced forecasting, **Artificial Intelligence**, and decision intelligence to make that data work in real time — turning information into action at the speed feedlots demand.

**A connected approach to feedlot management —
built on real-world data, industry insight, and practical intelligence.**

“We’ve always had the data — but now, working with Ever.Ag, we have the intelligence to act on it.”

— Dr. Dan Thomson, PAC and Founding Partner of Feedlot IQ

See Health Performance Early

- Detect early signs of respiratory disease and morbidity, informed by veterinarians.
- Spot intake dips or behavioral changes before they impact performance.
- Identify at-risk pens and cattle early — prevent problems before they start.

Act Fast with Connected Insights

- Combine feed, health, weather, and financial data into one clear, real-time view.
- Get defensible recommendations aligned with your protocols and preferences.
- Connect managers, vets, and nutritionists so everyone acts from the same playbook.

Improve Consistency and Confidence

- Track feed transitions, dry matter intake, and average daily gain with automatic alerts.
- Adjust feed and implant strategies for predictable gain and lower cost of gain.
- Strengthen animal wellness and operational efficiency — and protect margin along the way.
